P&G Steel Products Company
Press Release

For Immediate Release: 13 February 2008

P&G Steel Products is excited to announce the addition of a 1000 ton mechanical transfer stamping press in their Buffalo, New York facility. With a bed size of 120” by 48”, this press will enable P&G to supply a greater range of heavy duty stampings, CNC machined products, and production welded assemblies. In addition to the press, P&G is adding a heavy-duty SESCO feedline capable of handling coil stock up to a thickness of 0.5”. A 46” double-spindle, vertical Gardner Grinder will also be added. We are currently looking to fill all 3 shifts on this equipment.

The equipment additions are in response to a new customer and 4 year agreement. This work being transferred to P&G, is a testament to our commitment of providing cost effective, quality assured manufacturing solutions for our customers. The agreement is worth in excess of \$10MM, and positions P&G at a time when the Ontario market continues to expand and is looking to source more in the USA given the favorable currency rates.

More information can be found at www.pgsteel.com, or by contacting Mr. Andrew Ponkow, Executive Vice President, 716-896-7900
